

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as indicated below.

~~The invention relates to a~~ A method of indicating about an incoming connection and a radio terminal equipment arrangement ~~comprising~~including a cellular core unit ~~comprising~~having a control unit[;]] and one or more peripheral units is provided. The control unit is configured to indicate the incoming connection in one or more peripheral units but not in the cellular core unit, when the LPRF connection between the cellular core unit and the peripheral unit is available; and to indicate the incoming connection in the cellular core unit, when the LPRF connection between the cellular core unit and the peripheral unit is not available and to indicate the incoming connection in the peripheral unit, when the LPRF connection between the cellular core unit and the peripheral unit becomes available.
